CHANDRASEKHAR RAO THOGIRI

SOFTWARE ENGINEER | FRONTEND ENGINEERING | CLOUD & DEVOPS

Hyderabad, India • chandutogiri3@gmail.com • +91 9182886496

LinkedIn • GitHub • LeetCode • Portfolio

PROFESSIONAL SUMMARY

Software Engineer with approximately 5 years of experience at Tata Consultancy Services across frontend engineering and cloud/DevOps operations. Strong focus on React.js and JavaScript, building responsive interfaces, reusable UI components, interactive dashboards, and data visualizations. Experienced in REST API integration, frontend state management, CI/CD, AWS, Docker, Linux, and production troubleshooting. Also has foundational experience with LLM concepts and API-driven GenAI workflows through a document-to-document generation project. AWS Certified Solutions Architect – Associate; experienced collaborating with teams and stakeholders to deliver and support applications.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Redux, Context API, React Hooks, responsive UI, reusable components, dynamic tables, Recharts

Web & API: REST API integration, Tableau REST APIs, authentication workflows, frontend data handling; Next.js (basic familiarity)

AI / GenAI: LLM fundamentals, prompt-based workflows, OpenAI API integration (project-level foundational experience)

Cloud & DevOps: AWS (EC2, S3, IAM), Docker, CI/CD pipelines, Spinnaker, Ansible, Linux, Shell scripting, deployment automation

Programming & Data: JavaScript, Python, Firebase Authentication, Firestore, MongoDB

Quality & Collaboration: Git, Agile/Scrum collaboration, testing and validation, code troubleshooting, production monitoring (Splunk)

PROFESSIONAL EXPERIENCE

Software Engineer | Tata Consultancy Services (TCS) — **Hyderabad | Oct 2021 – Present**

Automation Dashboard | Frontend Engineering

Internal application for an Apple program displaying automation bot details and performance metrics, including forecasted and realized savings. Integrates Tableau REST APIs and Recharts visualizations, with persona-specific views.

- Developed responsive and reusable React components to present automation bot details and performance metrics.
- Integrated Tableau REST APIs to retrieve and render dashboard data.
- Built interactive charts and KPI visualizations using Recharts.
- Implemented dynamic tables with sorting and filtering, and used React Context API to share state across components.
- Created persona-specific dashboard views aligned with different user roles.

Cloud / DevOps, CI/CD & Production Support

- Worked with Spinnaker and Docker-based CI/CD pipelines to support deployments across development, staging, and production environments.
- Used Splunk dashboards to monitor application logs and error trends and support root-cause analysis during production incidents.
- Automated operational activities such as server patching and health checks using Python and Ansible.
- Supported Linux environments and helped troubleshoot application, deployment, and operational issues.

Rover Platform Service | Enterprise Email Platform

Supported a global enterprise email platform for creating and managing dynamic email templates using Apache Velocity Template Language (VTL).

- Developed and enhanced dynamic email templates based on client requirements.
- Worked with clients to gather requirements, incorporate feedback, and implement updates.
- Tested and validated templates for accuracy, reliability, and compatibility.

PROJECTS

PDD-to-SDD Generator | GenAI Document Generation

Tech: React, Python, FastAPI, OpenAI API, LLM fundamentals, document upload and generation

- Developed a project prototype that accepts a Process Design Document (PDD) as input and generates a Software Design Document (SDD) using an LLM.
- Built a React-based interface to support document upload, interaction with the backend, and generated-document preview/download workflows.
- Connected the frontend to Python/FastAPI backend endpoints and used an LLM API for document generation.
- Gained foundational hands-on exposure to LLM API usage, prompt-driven generation, and integrating GenAI capabilities into an application.

ShareAPlate – Food Donation Platform

Tech: React.js, JavaScript, Vite, Firebase Authentication, Firestore, HTML5, CSS3, Vercel

- Developing a responsive platform that connects food donors with individuals requesting food.
- Implemented Firebase Authentication and dedicated Donor and Requestor account workflows.
- Built modular, reusable React components for Donor, Requestor, and Profile pages, initially validating workflows with static data.
- Added profile-level activity statistics and progressively integrating Firestore for data persistence and updates.
- Deployed the application on Vercel with mobile-first design principles.

EDUCATION

B.Tech – Computer Science & Engineering | Aug 2017 – Jul 2021

Vignan's Institute of Information Technology, Visakhapatnam, India

CERTIFICATION

AWS Certified Solutions Architect – Associate | Amazon Web Services | Sep 2023

ADDITIONAL INFORMATION

Languages: Telugu (Native), English (Professional Proficiency)

Strengths: Feature ownership, analytical troubleshooting, clear technical communication, stakeholder collaboration, and working independently through development and deployment support.
